

ISO-14001 (ISO14)

This course explores the standards and requirements for voluntary certification on ISO-14000, a global standard for environmental management system which provides an objective basis for verifying a company's claim about its corporate environmental performance.

Certification under ISO-14000 is advantageous because it will allow the company to be efficient and more profitable as it makes less or no waste that unfavorably affects the environment. Projecting a perception of genuine concern for the environment and sustainable development, the company will gain the trust and confidence of customers and stakeholders. Especially in international trade, customers tend favor suppliers that comply with environmental rules. Due to legal concerns and pressure from the society, it is getting riskier to deal with non-environment friendly suppliers.

Objectives: At the end of this training, the participants should be able to:

1. Appreciate the elements and requirements of ISO 14000
2. The process of certification to the Standard
3. Gain an idea on how to develop an EMS and integrate it with ISO 14000

Agenda:

- Overview of ISO 14001 Environmental Management Systems
- Development of Environmental Policy
- Planning your EMS
- Developing an Environmental Management Program
- Implementation and Operations
- Checking and Corrective Actions
- Certification for ISO-14000
- Environmental Management Audits
- Management Review

Who should attend: EMS Management Representatives, Pollution Officers/Engineers, Product/Process Design Engineers, Documentation Teams, Department Heads, Prospective ISO 14000 Team Members and Internal Auditors

Seminar Fee: P15,904 (VAT-inclusive)

Webinar Sessions: 4

Facilitator: Elizabeth A. Aurin

Dates: TBA - *Recommended for face-*
